Business Proposal

PREPARED BY: IN-TA SOLUTIONS

For: Flyera Water Supply

Date:06/09/2026

1. Executive Summary

IN-TA Solutions is pleased to present this proposal for a Unified Dual-Operations Management System, custom-built to manage both the Water Can Delivery operations and the Waste Glass Supply Chain within a single, centralized platform. While the system operates on a single robust database for unified owner reporting, it utilizes strict Role-Based Access Control (RBAC). This ensures that water delivery staff and waste glass collection staff log into entirely separate, customized interfaces, completely isolated from each other's data and workflows.

2. Objectives

To build a highly scalable, multi-interface web application that:

- Consolidates two distinct business operations into one administrative backend, reducing hosting and maintenance overhead.
- Provides role-isolated driver and staff applications, ensuring water drivers only see run-sheets and glass drivers only see material collection screens.
- Digitizes the entire waste glass lifecycle from free/paid property pickups to godown sorting and vendor dispatches.
- Automates daily water delivery route planning, prepaid customer wallets, and strict full/empty can inventory reconciliation.

3. Software Structure & Modules

Modules Included

1. Unified Owner Analytics Dashboard

- Dual-Business Toggle: A centralized executive view where the owner can seamlessly toggle between real-time metrics for the Water Division and the Glass Division.
- Role Management: Master control panel to assign staff accounts to specific divisions (Water Driver, Glass Driver, Dispatcher, Godown Staff), ensuring strict interface separation.

- Consolidated Financials: Daily reconciliation reports covering driver cash disbursements for glass pickups alongside prepaid wallet deductions for water deliveries.

2. Water Division Interface (Drivers & Dispatch)

- Dynamic Route Planning: Auto-generate daily delivery paths based on active customer subscriptions.
- Digital Run-Sheets & Action Logging: A mobile interface for water drivers to log the exact number of full cans delivered and empty cans collected at each stop.
- Vehicle Load Ledger: Balances morning truck loading against evening returns to flag missing inventory.
- Prepaid Wallet System: Automatically deducts delivery costs from a customer's digital wallet balance.

3. Waste Glass Division Interface (Drivers & Godown Staff)

- Driver Collection Flow: A streamlined app for drivers to tag property locations, log estimated material weight, and input cash amounts disbursed for paid pickups.
- Godown Handover & Sorting: Interfaces for warehouse staff to accept raw glass from drivers, log the sorting yield (e.g., white vs. mixed), and track wastage.
- Vendor Dispatch: Digital sign-offs for when vendors arrive, logging specific categories and tonnages loaded onto trucks to instantly decrement godown inventory.

4. Deliverables

- A unified backend infrastructure serving two distinct frontend applications via Role-Based Access Control.
- Cross-browser compatibility (Chrome, Firefox, Edge, Safari) and mobile-optimized interfaces for all field staff.
- Secure database architecture tailored for strict inventory, routing, and financial reconciliation across both businesses.
- Source code & full server deployment.

5. Project Timeline

TASK	TIMELINE
DEVELOPMENT	14-20 business days
TESTING & FEEDBACK ROUNDS	1-2 days

6. Estimated Cost:

The total estimated cost for the unified dual-operations software is 48,700 INR, which includes the design, development, and deployment of a fully responsive web application tailored to both your water and glass divisions. This is a one-time fee and also includes 3 Months of free maintenance and minor updates.

COMPONENT	ESTIMATED COST (INR)
DUAL-OPERATIONS MANAGEMENT SYSTEM	48,700/-
TOTAL	48,700/-

Please Note: Any annual renewal charges—such as hosting, domain renewal, SSL certificates, server maintenance, and third-party service subscriptions (e.g., SMS gateway, cloud storage)—will be applicable after one year from the date of project completion. These costs are external and will be billed separately based on the actual usage and service provider rates.

7. Conclusion

This unified software will serve as the complete digital backbone for your enterprise, allowing you to seamlessly scale two distinct operations without the overhead of managing separate software systems. By providing targeted, isolated interfaces for your ground staff while rolling all financial and inventory data up to a single executive dashboard, the platform guarantees efficiency, strict accountability, and total transparency.
